KUNAL GHOSH

Backend & Platform Engineer — Distributed Systems, CI/CD and DevOps Automation
Hojai, Assam, India | kunalghosh10000@gmail.com | Open to Remote and Relocation

PROFESSIONAL SUMMARY

Backend engineer with 6+ years building production infrastructure: CI/CD automation, distributed job processing, SSH access management, and AI-assisted deployment and monitoring. Built a self-service pipeline platform that cut deployment time by ~40% and production bugs by ~80%, a high-throughput email service, and a backup system that cut backup time by ~60% using clustering and parallel processing. Comfortable across Go, Node.js, Python and PHP, with hands-on experience in Nomad, Docker, GitLab CI/CD and Linux infrastructure. Looking for senior backend or platform engineering roles.

CORE SKILLS

Languages	Go (Golang), Node.js, Python, PHP, JavaScript, SQL, Java (Familiar)
Backend & Systems	REST API Design, Microservices, Distributed Systems, Asynchronous & Queue Processing, System Design, SSH Proxying & Access Management
DevOps & Infrastructure	CI/CD Pipelines, GitLab CI, Nomad (Cluster Orchestration), Docker, Linux Server Administration, Monitoring & Alerting
Frameworks & Protocols	Django, CodeIgniter, SMTP/IMAP, AI-Assisted Automation, Spring Boot (Familiar)

PROFESSIONAL EXPERIENCE

Software Engineer — Triophase Global Services, Kolkata, West Bengal Aug 2022 – Present

- Designed and built a self-service CI/CD pipeline platform integrated with ClickUp and GitLab, giving teams one-click provisioning for any project; cut deployment time by ~40% and production bugs by ~80%.
- Built a custom SMTP/IMAP email service in Node.js with queued processing for high-volume, high-throughput, parallel email delivery.
- Designed an on-demand cluster provisioning platform on Nomad, enabling dynamic cluster creation and application deployment at scale for infrastructure teams.
- Rebuilt the company's legacy backup system into a high-performance incremental backup manager, cutting backup time by up to 60% with clustering and parallel processing.
- Built a high-performance SSH proxy server in Go with an API-managed access layer, securely routing and auditing SSH connections across multiple hosts without exposing direct infrastructure access.
- Built an AI-assisted deployment and monitoring system that provisions and deploys applications end-to-end over SSH and performs automated issue detection and remediation.

Web Developer — Matrix Web Development, Guwahati, Assam Jan 2019 – May 2021

- Built an e-commerce platform on CodeIgniter 3 with inventory management and customer behaviour tracking.
- Built a multi-school management system covering student, teacher, exam and academic workflows, with role-based access control.
- Built a journal management and CRM system for admin-side client management, workflow tracking and scheduled email notifications.

NOTABLE PROJECTS

KQueue / Job Manager — Laravel Feb 2026

- Built a production-ready async job manager for Laravel that runs thousands of jobs concurrently on a single thread with no changes to existing job code, addressing a long-standing concurrency limitation in the framework.

Gate SSH — SSH Proxy & Access Management API (Go) Jan 2025

- Built a high-performance SSH proxy server in Go with REST APIs for session management, authentication and access policies, with secure credential handling and no direct infrastructure exposure, for centralized remote-access auditing.

TradeFundrr — Mock Trading Platform (Django, Python) Nov 2023

- Built a simulated trading platform in Django with portfolio management, buy/sell order placement, transaction history and near real-time price updates, deployed in production.

EDUCATION

Bachelor of Arts, Economics — Guwahati University, Guwahati, Assam 2019 – 2022
CGPA: 8.0 / 10
